

# **AMTI Plugin for Vicon Nexus**

## **Revision 1.14 notes**

Updated: 26-Jun-2023

### **1. Changes from Revision 1.13**

Revision 1.14 of the AMTI plugin (AMTI Digital Device V1\_14.vdd) has the same functionality as Revision 1.13 with one exception. An outstanding problem with parameter initialization has been repaired. This means that saved configurations that are loaded will properly update the Fz data filter parameter, the acquisition rate parameter, and the data collection sync parameter.
